Dear Hiring Manager,

I am excited to apply for the Artificial Intelligence Engineer role at ioet Inc. With over two years of experience as a **Software Developer and Machine Learning Engineer**, I bring a proven track record of delivering AI-driven and data-focused solutions across healthcare, fintech, and e-commerce.

Most recently, I have worked as an **AI Quality Analyst at ScaleAI**, evaluating and refining model outputs to ensure accuracy and coherence. Previously at **Clipp**, I designed and deployed analytics solutions, implementing clustering and predictive models to uncover user behavior insights and optimize marketing strategies. I also developed a **full-stack clinic management system**, achieving significant efficiency improvements in patient data handling.

Beyond professional roles, I have built innovative projects like the **Insurance Policy AI Assistant**, a multi-tool RAG-based agent that streamlines underwriting by combining policy vector search with live web data retrieval. These experiences reflect my ability to bridge software engineering with machine learning to create impactful, scalable solutions.

I am particularly motivated by the opportunity to contribute to a company that values **innovation, cutting-edge technology, and the practical application of AI to solve real-world problems**. I am confident that my technical expertise in **Python, TensorFlow, LangChain, Docker, and FastAPI**, combined with my hands-on experience in deploying real-world AI applications, will allow me to contribute effectively to your team.

Thank you for considering my application. I would welcome the opportunity to discuss how my skills and experiences align with your needs.

Sincerely,
Luis Mora
